
1. Automated replication procedure

All tables and figures can be replicated from the processed data, which is included in this package. To replicate the results from the main paper, run the do-file “Analysis”, after replacing the path to the replication package. The other do-files replicate the results from the appendices.

2. List of processed data files included in the package

Main datasets: Datasets 1-3 below contain the necessary data to reproduce all results from the main paper.

1. mortality.dta:

- This dataset has 204,893 observations from the National Family and Health Survey (NFHS) of 2015-2016. The unit of observation is infants. The processed data file also contains measures of political competition at the Parliamentary Constituency level, as well as various controls extracted from the Census of India. See codebook.

2. healthcare.dta:

- This dataset has 11,381 observations from the District Level Household and Facility Survey (DLHS) from 2012-2013 and 2007-2008. The unit of observation is Primary Health Centres. The processed data file also contains measures of political competition at the Parliamentary Constituency level, as well as various controls extracted from the Census of India. See codebook.

3. nrega.dta:

- This dataset has 451,231 at the level of Gram Panchayats (GPs). The data was generated by matching GP names from the MGNREGA Public Data Portal to GP names in the Census of India. The processed data file also contains measures of political competition at the Parliamentary Constituency level, as well as various controls extracted from the Census of India. See codebook.

Other dataset: Datasets 4-7 contain the data necessary to reproduce the results in the appendices of the paper.

4. appendixB.dta

- This dataset contains 465 observations at the level of Parliamentary Constituencies, necessary to reproduce the results in Appendix B. The data file

also contains some demographic variables constructed from the Census of India.
See codebook

5. appendixD_D4.dta

- This dataset contains 351,861 observations at the household level from the District Level Household and Facility Survey (DLHS) from 2012-2013 and District Level Household and Facility Survey (DLHS) from 2007-2008. The datafile contains the necessary data to reproduce Table D4 in the appendix. The processed data file also contains measures of political competition at the Parliamentary Constituency level, as well as various controls extracted from the Census of India. See codebook.

6. appendixD_D5a.dta

- This dataset contains 432,194 observations at the village level from the Economic Census of 2013. The dataset can be used to reproduce Columns 1-4 of Table D5 in the appendix. The processed data file also contains measures of political competition at the Parliamentary Constituency level, as well as various controls extracted from the Census of India. See codebook

7. appendixD_D5b.dta

- This dataset contains 339,368 observations at the village level from the Census of India 2011. The dataset can be used to reproduce Columns 5-6 of Table D5 in the appendix, and contains information on average night-time light for the period 2010-2013. The processed data file also contains measures of political competition at the Parliamentary Constituency level, as well as various controls extracted from the Census of India. See codebook

3. Information on software and version used for the analysis

The analysis and data construction code are written in Stata 17, so users should have some version of Stata 17 or higher.
