

We have computed equity scores at state, district, and panchayat level in terms of i) equity in providing employment to percentage of marginalized households as compared to the percentage of general caste households, ii) equity in percentage of marginalized households demanding employment as compared to general caste household iii) equity in persondays of employment to marginalized households as compared to general caste households in a) between panchayats with significant marginalized population as compared to panchayats without significant marginalized population b) and equity in terms of percentage of household getting employed and persondays of employment towards marginalized castes within panchayat.

We compute equity scores for assessing equity towards scheduled castes (SC) and scheduled tribes (ST). We have also developed an aggregate metric to represent overall inequity towards SC and ST at every level.

The metrics are available in different CSVs. The structures are presented below.

The description of state_level_st_equity_metrics.csv and state_level_sc_equity_metrics.csv is presented in **State level SC/ST equity metrics**.

State level SC/ST equity metrics

S.No.	Column	Data Type	Description
1	State_code	Integer	Census code for the state
2	State	String	Name of the state
3	Category	Integer	Panchayat category for which equity metrics are evaluated. Category=1 shows equity towards Panchayats with “Consolidated significant SC population panchayats”. Category=2 shows equity towards “Segregated significant SC population panchayats”, Category=3 shows equity towards “Mixed SC population panchayats”. Category=4 shows equity towards “Consolidated significant ST population panchayats”, Category=5 shows equity towards “Segregated significant ST population panchayats”, Category=6 shows equity towards “Mixed ST population panchayats”, Category=7 shows

			equity towards all 6 categories of panchayats.
4	ATE1	Float	Average treatment effect in terms of normalized employment provided per household to panchayats with significant marginalized population as compared to the other panchayats (without significant marginalized population).
5	pvalue1	Float	Pvalue from the t-test for evaluating ATE1. An indicator of significance of ATE score. Pvalue >0.95 with a positive ATE score indicates equity in terms of a specific metric.
6	ATE2	Float	Average treatment effect in terms of normalized employment demanded per household to panchayats with significant marginalized population as compared to the other panchayats (without significant marginalized population).
7	pvalue2	Float	Pvalue from the t-test for evaluating ATE2. An indicator of significance of ATE score. Pvalue >0.95 with a positive ATE score indicates equity in terms of a specific metric.
8	ATE3	Float	Average treatment effect in terms of normalized employment provided in terms of persondays to panchayats with significant marginalized population as compared to the other panchayats (without significant marginalized population).
9	pvalue3	Float	Pvalue from the t-test for evaluating ATE3. An indicator of significance of ATE score. Pvalue >0.95 with a positive ATE score indicates equity in terms of a specific metric.

10	ATE4	Float	Average treatment effect in terms of normalized employment provided per household to marginalized households as compared to general caste households within a panchayat.
11	pvalue4	Float	Pvalue from the t-test for evaluating ATE4. An indicator of significance of ATE score. Pvalue >0.95 with a positive ATE score indicates equity in terms of a specific metric.
12	ATE5	Float	Average treatment effect in terms of normalized persondays of employment provided to marginalized households as compared to general caste households within a panchayat.
13	pvalue5	Float	Pvalue from the t-test for evaluating ATE5. An indicator of significance of ATE score. Pvalue >0.95 with a positive ATE score indicates equity in terms of a specific metric.

The description of state_level_inequity_index_modified.csv is presented in **State level inequity index modified**.

State level inequity index modified

S.No.	Column	Data Type	Description
1	State_code	Integer	Census code for the state
2	State	String	Name of the state
3	Discrimination_type	String	SC: Inequity index towards scheduled caste ST: Inequity index towards scheduled tribe

4	Inequity_index	Float	A metric representing the extent of inequity towards marginalized communities.
5	State_type	String	SC: States with above average number of significant SC population panchayats ST: States with above average number of significant ST population panchayats Other: Rest of the states

The description of district_level_st_equity_metrics.csv and district_level_sc_equity_metrics.csv is presented in **District level SC/ST equity metrics**.

District level SC/ST equity metrics

S.No.	Column	Data Type	Description
1	State_code	Integer	Census code for the state
2	District_code	Integer	Census ode for the district
3	State	String	Name of the state
4	District	String	Name of the district
3	Category	Integer	Panchayat category for which equity metrics are evaluated. Category=1 shows equity towards Panchayats with “Consolidated significant SC population panchayats”. Category=2 shows equity towards “Segregated significant SC population panchayats”, Category=3 shows equity towards “Mixed SC population panchayats”. Category=4 shows equity towards “Consolidated significant ST population panchayats”, Category=5 shows equity towards “Segregated significant ST population panchayats”, Category=6 shows equity towards “Mixed ST population panchayats”, Category=7 shows equity towards all 6 categories of panchayats.
4	ATE1	Float	Average treatment effect in terms of normalized employment provided per household to panchayats with significant marginalized population as compared to the other

			panchayats (without significant marginalized population).
5	pvalue1	Float	Pvalue from the t-test for evaluating ATE1. An indicator of significance of ATE score. Pvalue >0.95 with a positive ATE score indicates equity in terms of a specific metric.
6	ATE2	Float	Average treatment effect in terms of normalized employment demanded per household to panchayats with significant marginalized population as compared to the other panchayats (without significant marginalized population).
7	pvalue2	Float	Pvalue from the t-test for evaluating ATE2. An indicator of significance of ATE score. Pvalue >0.95 with a positive ATE score indicates equity in terms of a specific metric.
8	ATE3	Float	Average treatment effect in terms of normalized employment provided in terms of persondays to panchayats with significant marginalized population as compared to the other panchayats (without significant marginalized population).
9	pvalue3	Float	Pvalue from the t-test for evaluating ATE3. An indicator of significance of ATE score. Pvalue >0.95 with a positive ATE score indicates equity in terms of a specific metric.
10	ATE4	Float	Average treatment effect in terms of normalized employment provided per household to marginalized households as compared to general caste households within a panchayat.

11	pvalue4	Float	Pvalue from the t-test for evaluating ATE4. An indicator of significance of ATE score. Pvalue >0.95 with a positive ATE score indicates equity in terms of a specific metric.
12	ATE5	Float	Average treatment effect in terms of normalized persondays of employment provided to marginalized households as compared to general caste households within a panchayat.
13	pvalue5	Float	Pvalue from the t-test for evaluating ATE5. An indicator of significance of ATE score. Pvalue >0.95 with a positive ATE score indicates equity in terms of a specific metric.

The description of district_level_inequity_index_modified.csv is presented in **District level inequity index modified**.

District level inequity index modified

S.No.	Column	Data Type	Description
1	State_code	Integer	Census code for the state
2	State	String	Name of the state
3	District_code	Integer	Census code for the district
4	District	String	Name of the district
5	Discrimination_type	String	SC: Inequity index towards scheduled caste ST: Inequity index towards scheduled tribe

6	Inequity_index	Float	A metric representing the extent of inequity towards marginalized communities.
7	State_type	String	SC: States with above average number of significant SC population panchayats ST: States with above average number of significant ST population panchayats Other: Rest of the states

The description of panchayat_level_sc_inequity.csv and panchayat_level_st_inequity.csv is provided in Panchayat level **SC/ST equity & inequity metrics**.

Panchayat level SC/ST equity & inequity metrics

S.No.	Column	Data Type	Description
1	Index	Integer	NA
2	MIS_index	Integer	Panchayat ID generated to refer to the panchayat in Fairness application
3	Equity_score1	Float	Equity score in terms of normalized employment provided per household to panchayats with significant marginalized population as compared to the other similar panchayat (without significant marginalized population).
4	Equity_score2	Float	Equity score in terms of normalized employment demanded per household to panchayats with significant marginalized population as compared to the other similar panchayat (without significant marginalized population).
5	Equity_score3	Float	Equity score in terms of normalized persondays of employment provided

			to panchayats with significant marginalized population as compared to the other similar panchayat (without significant marginalized population).
6	Equity_score4	Float	Equity score in terms of normalized employment provided per household to marginalized households as compared to the other similar general caste within panchayat.
7	Category	Integer	Panchayat category for which equity metrics are evaluated. Category=1 shows equity towards Panchayats with “Consolidated significant SC population panchayats”. Category=2 shows equity towards “Segregated significant SC population panchayats”, Category=3 shows equity towards “Mixed SC population panchayats”. Category=4 shows equity towards “Consolidated significant ST population panchayats”, Category=5 shows equity towards “Segregated significant ST population panchayats”, Category=6 shows equity towards “Mixed ST population panchayats”
12	Equity_score5	Float	Equity towards marginalized castes in terms of normalized persondays of employment provided to marginalized households as compared to general caste households within the panchayat.
13	Inequity_score	Float	Metric to represent aggregate inequity towards marginalized communities

In our dataset we generated an index to identify panchayats since panchayats do not have a census ID. However, Local Government Directory also has an ID for panchayats. Therefore, we have created a mapping between Panchayat_ID (as in Local Government Directory) and MIS_Index (ID used in our application). The mapping is available in panchayat_ID_MIS_index_mapping.csv

Panchayat ID MIS Index mapping

S.No.	Column	Data Type	Description
1	Panchayat_ID	Integer	Panchayat ID as in Local Government Directory
2	Gram_panchayat_name	String	Name of the Panchayat
3	Subdistrict census code	Integer	Census code for the sub-district
4	Subdistrict name	String	Name of the Sub-district
5	District census code	Integer	Census code for the district
6	District name	String	Name of the district
7	State census code	Integer	Census code for the state
8	State name	String	Name of the state
9	mis_index	Integer	Panchayat ID generated to refer to the panchayat in Fairness application
